

## Description:

The MQHOXX-YYDM-ZZZ-2S module is a High Power RF Driver with two RF outputs derived from one oscillator and is designed to drive two Q-Switches. There are two digital modulation control inputs: Fixed and Variable. These controls allow the customer to issue a pulse command of a "Fixed" pulse width, the duration determined by the Driver's pulse width control, settable by the customer, or issue a "Variable" pulse command, the duration determined by the input signal's pulse width. The output power of both channels are controlled by the analog input, where the mode of operation is defined by ZZZ = A05 normal analog mode, or R05 analog switched to full RF mode or a triggered RF Ramp Down mode where ZZZ = FPS first pulse suppression mode or PPK pre-pulse kill mode. The choices of Frequency (XX), Output Power (YY), and Power Control (ZZZ) option are "Factory Set" when ordered. The driver requires forced air cooling.

The product delivered will be manufactured to be compliant with EU Directive 2011/65/EU for Reduction of Hazardous Substance. The product will be manufactured to other standards upon customer request.

High Power 2 Channel RF Driver: For 2 Acousto-optic Q-Switches MQHOXX-YYDM-ZZZ-2S

Former Model Number:
390XX-YYDMZZZ-2CH-A

## Key Features:

- 24, 27.12, 40.68, 68, or 80 MHz RF Frequency (XX)
- 0.01\% Quartz Stabilized
- 2 Outputs with up to 50 watts RF power output (YY) per channel (2S)
- Two TTL Digital Modulation Inputs: fixed and variable pulse width.
- Up to 100 kHz pulse rate.
- Analogue Modulation or Triggered RF Ramp Down Mode (ZZZ)
- Fault Protection on Low Power, High Power, and High VSWR
- Operates on 28 VDC

## Applications:

- RF Driver for an Acousto-Optic Q-Switch Device used spoiling the " $Q$ " of a CW laser so as to output an intense pulse of light.
- Used in industrial, medical, or military applications.

## MQHOXX－YYDM－ZZZ－2S

## PARAMETER：

Number of Channels
Output Frequency：

Spurious Levels：
Harmonic Distortion
Digital Inputs：
Fixed Mod In
Variable Mod In
Extinction Ratio：
RF Rise Time 10\％to $90 \%$
RF Fall Time： $90 \%$ to $10 \%$
Modulation Repetition Rates：

Fixed Modulation
Available Pulse Control Options：
Pulse Control Mode is＂Factory Set When Ordered＂：FPS＝First Pulse Suppression
PPK＝Pre Pulse Kill
A05＝Analog Control
R05＝RF Switched to Analog Control
＿＿＿＝Digital Modulation Only

FPS Trigger／Analog input
Units Configured With FPS，PPK：TTL Levels，Triggered on TTL
Rising Edge．
Units Configured With A05，R05： 0 to 5 Volts Analog．
RF Output Power Per Channel＂Factory Set When Ordered＂：$\underline{Y Y}=50$ watts nominal for 24,27 ，and 41 MHz units Both Outputs Must Have 50 ohm Load Adjustable from 12 to 50 watts．
＊25 watts nominal for 68 and 80 MHz unit，Adjustable from 12 to 25 watts．
Output Impedance：
Shutter Output：

Supply Voltage Input
Supply Current Input
Operating Temperature
Air Flow through Heat Sink
50 ohms Nominal
0.3 sec delay．Opens on fault．

Capable of sinking 1 amp at 28 volts maximum．
+28 VDC $\pm 1 \%$
6．5 A for $25 \mathrm{~W} /$ ch units 9.0 A for $50 \mathrm{~W} / \mathrm{ch}$ units
$+10^{\circ} \mathrm{C}$ to $+55^{\circ} \mathrm{C}$
$>36$ CFM（＞ 17 litres／second）＠ $25^{\circ} \mathrm{C}$

## MAXIMUM RATINGS：

Supply Voltage：
30 volts DC maximum
Power Output：
No DC Feedback allowed
$-20^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$

See Figure 2
See Figure 3
See Figure 4
See Figure 5
See Figure 6

## CONNECTORS \＆MECHANICAL：

RF Output Connector：
Power Supply Connections：

## Located on front panel

## BNC Female <br> Vcc Solder Post <br> Return Ground Lug

Located on front panel See Detail A of Outline Drawing．

## 25PIN SUB D CONNECTOR PINOUT：

（）

| 1 | $+5 \mathrm{~V}$ | ＋5V output for external fault indicators， 75 mA available． |
| :---: | :---: | :---: |
| 2－3 | NC N | No connection． |
| 4 | THERM RTN G | Ground－to be used as a return for Both THERM and THERM 2. |
| 5 | THERM 2 T | Thermostat connection－driver enters a fault condition unless this is shorted to ground． |
| 6 | THERM T | Thermostat connection－driver enters a fault condition unless this is shorted to ground． |
| 7 | DRV TEMP N | Normally HIGH，goes LOW when the driver is in an overheat fault． |
| 8 | QS TEMP N | Normally HIGH，goes LOW when no short present on THERM． |
| 9 | HVSWR H | High VSWR fault，normally HIGH，goes LOW during fault． |
| 10 | LP L | Low RF Power indicator，normally HIGH，goes LOW while driver output is below the Low RF Power threshold． |
| 11 | HP Hid | High RF Power fault，normally HIGH，goes LOW during fault． |
| 12 | MOD IN ANALOG | G Controls the output power level in A05 and R05 models |
| 13 | FAULT RESET P | Pulse LOW to reset the driver from a fault condition．This line should not be held LOW or it will defeat some of the fault conditions． |
| 14 | FPS TRG T | Triggers a suppression pulse on a RISING edge． |
| 15 | MOD IN FIXED | Turns the driver off for the duration set by the pulse width control． |
| 16 | MOD IN VARIABL | EE Turns the driver off while this input is HIGH． |
| 17 | SYNC OUT OU | Outputs a signal synchronized to the modulation output． |
| 18－19 | NC No | No connection． |
| 20 | SHUTTER 0 | 0.3 sec delay．Opens on fault．Capable of sinking 1 amps at 28 volts maximum． |
| 21－24 | NC No | No Connection |
| 25 | GND G | Ground． |

Note：Some Control Signals Shown on Outline Drawing are Not Available on Standard Units．

## INDICATORS：

Power
Low Power

High Power

High VSWR

QS Temp

DRV Temp Driver

## Located on front panel

Power Indicator－The module has 28 V applied on the DC connector．
Faults after 0.3 second，power below LP Set Point．
Resets on power adjusted above Set Point．
Faults when power above HP Set Point． Reset required after removing fault．
Faults when reflected power above VSWR Set Point． Reset required after removing fault．

Faults on open Thermostat．
Resets on closed Thermostat．（Q－Switch below set temperature）
The internal temperature of the module has reached $60^{\circ} \mathrm{C}$ ．The driver will remain in this fault condition until it cools down．

## ADJUSTMENTS：

RF Power Level Adjustment
LP Set Point

HP Set Point

VSWR Set Point

Pulse Width

## Located Inside Unit Through Holes in Module Top Cover

Adjusts the output RF Power．
Adjusts the minimum power threshold．If the module＇s output goes below this set value，the low power warning light will turn on，but the driver will continue to output power．This is a warning，not a true fault condition．

Adjusts the maximum power threshold for the module．If the output rises above this threshold，the module will cease output until it is reset．

Adjusts the module＇s tolerance for a mismatched load connected to RF Out． If a mismatch is detected，the driver will cease outputting power until reset．
Adjusts the length of time the driver outputs no RF energy after receiving a trigger． $1 \mu \mathrm{~s}$ to $14 \mu \mathrm{~s}$ ．

The following adjustment is not used on units configured with FPS or PPK：
Threshold Sets the point below which the analog voltage is ignored and the system output is shut off．
The following adjustments are not used on units configured with Analog Input（A05，R05）：

FPS Start
FPS Slope

FPS Window

Adjusts the initial power level of the first pulse．
Adjusts how quickly the RF pulses return to their normal level after the FPS has been triggered． $20 \mu \mathrm{~s}$ to $300 \mu \mathrm{~s}$ ．

Adjusts the duration of the suppression pulse cycle． $20 \mu \mathrm{~s}$ to $300 \mu \mathrm{~s}$ ．

Note：Some Adjustments Shown on Outline Drawing are Not Available on Standard Units．

## Ordering Codes:

Example: MQH027-50DM-A05-2S
A two channel 27 MHz RF Driver with two TTL Digital Modulation inputs (fixed and variable pulse width) and an analog input (A05) which enables control of the RF output power. Designed to Drive two AO Q-Switches requiring 50 watts RF Power or less per channel. Delivered as a RoHS compliant, forced air cooled OEM Module.

Code - Standard Frequencies 024 24.000MHz 027 27.120 MHz 041 40.680 MHz 068 68.000 MHz 080 80.000 MHz

Q-Switch Driver

Optional company information if customized (2 letters +number)

RF Split into 2 Outputs
Code - Standard Control Options
A05 - Analog 0 to +5 V Power Control
R05 - Analog 0 to +5 V Power Control - Switched
FPS - First Pulse Suppression
PPK - Pre Pulse Kill
No Code when specified as TTL Digital only
M - OEM Module
S - Rack Mountable Box

D - Digital
RF Power 12 to 50
Watts range

## Technical Assistance \& Customization

Our Engineering and Sales team are available to discuss your requirements and will assist you in selecting the most appropriate acousto-optic Q-Switch/ Driver combination for your application.
